SUMMARY

Full Stack Developer at Level33, working across six concurrent web and mobile products: public healthcare, tax collection and enforcement systems for the public sector, plus a multi-tenant private ERP. Since 2025 I have also built e-commerce automation in Python and API integrations with OAuth 2.0 authentication. I deliver on both ends of the stack, using React, TypeScript and Next.js on the front and Node.js/Express and C#/.NET 8 on the back, over PostgreSQL with Prisma and Entity Framework Core. Computer Science undergraduate at UCB.

TECHNICAL SKILLS

- **Frontend:** React, TypeScript, Next.js, React Native (Expo), React Query, Zod
- **Backend:** Node.js/Express, C#/.NET 8, ASP.NET Core, Prisma ORM, Entity Framework Core, REST APIs
- **Databases:** PostgreSQL, SQLite (offline-first mobile), relational modeling, migrations
- **Data & Automation:** Python (data pipelines, XLSX automation), API integrations, OAuth 2.0
- **Tools:** Git, GitLab, GitHub, code review

EXPERIENCE

Full Stack Developer — Level33

May 2026 – Present

Brasília, Brazil · Six concurrent projects, web and mobile: public sector (healthcare, tax, enforcement), private ERP, and a field-inspection app

- Built the financial audit module for public healthcare billing from scratch in Node/Express with Prisma and PostgreSQL, using an immutable invoice snapshot to guarantee accounting traceability and block retroactive changes to audited amounts.
- Developed the clinical authorization documents module with PDF generation and post-signature edit locking, meeting document integrity requirements of the clinical workflow.
- Delivered the full supply-chain layer of a multi-tenant ERP (suppliers, purchasing, stock) in C#/.NET 8 with Entity Framework Core.
- Began contributing to mobile development (React Native) on the VISA-DF field-inspection app, with offline-first SQLite storage and background sync; built a server-anchored trusted-time service to guarantee auditable timestamps even offline or with a tampered device clock.
- Own the complete task cycle: requirements analysis, front-end and back-end implementation, bug fixing and code review in Git/GitLab.

Administrative Manager — E-commerce Automation & Operations — Le Parfum

Feb 2025 – Present

- Built a Python SEO pipeline that rewrote and standardized a 677-product catalog, replacing manual listing work.
- Automated bulk product registration in Bling ERP via XLSX imports, removing the item-by-item bottleneck.
- Implemented integration with the Bling ERP v3 API over OAuth 2.0 for catalog and stock synchronization.
- Manage ERP-to-marketplace integrations (Mercado Livre, Shopee, TikTok Shop, Amazon): catalog, stock and orders.

Administrative Apprentice — Brasil 21

Feb 2024 – Nov 2024

- Supported corporate governance routines: document organization and spreadsheet management.

PROJECTS

- **React Native (Expo) mobile apps** — delivered two complete apps for an internal Level33 technical review that asked each developer for one. An offline Bible reader using AsyncStorage and REST API consumption, plus the Le Parfum kiosk app.
- **Le Parfum interactive kiosk** — tablet catalog with olfactory filters and an AI virtual consultant (Claude API), syncing products through Bling ERP v3 over OAuth 2.0.
- **Personal portfolio** — self-built static site in HTML/CSS/JS with light/dark themes and an English version.

EDUCATION

B.Sc. in Computer Science — Universidade Católica de Brasília (UCB)

Expected 2029

LANGUAGES & COURSES

- Portuguese: native
- English: advanced technical reading (documentation and code); conversational level developing
- Python for Data Analysis — Udemy
